

Zero Africa Ecosystem — Quick Start Deployment Card

Deployment Order — Important

Deploy in this order: TAG → GFA → BD

Order	Site	Reason
1st	TAG	Fully self-contained. No hard dependencies on GFA or BD.
2nd	GFA	Must be deployed before BD is live. When <code>deploy.sh</code> asks for <code>BD_BASE_URL</code> , enter <code>https://betterdriver.co.za</code> even if BD is not yet running — this value is used in activation emails sent to drivers.
3rd	BD	Deployed last. Receives inbound activation links from GFA. No outbound dependencies on TAG or GFA.

After all three are live: Update TAG's `GFA_PRICING_API_URL` in `.next/standalone/.env.local` to `https://greenfreightacademy.co.za/api/pricing`, then run `pm2 restart tag-site` to enable live pricing on the Academy page.

Before You Begin (All Sites)

Install Node.js 20 and PM2 on your server (run once):

```
curl -fsSL https://deb.nodesource.com/setup_20.x | sudo -E bash -
sudo apt-get install -y nodejs
npm install -g pm2
sudo apt-get install -y nginx certbot python3-certbot-nginx
```

Site 1 — Transport Action Group

ZIP: TAG-transportactiongroup.co.za.zip | **Port:** 3002 | **Domain:** transportactiongroup.co.za

```
unzip TAG-transportactiongroup.co.za.zip -d TAG
cd TAG
chmod +x deploy.sh
bash deploy.sh
```

Then configure Nginx:

```
sudo cp nginx.conf /etc/nginx/sites-available/tag
sudo ln -s /etc/nginx/sites-available/tag /etc/nginx/sites-enabled/tag
sudo nginx -t && sudo systemctl reload nginx
sudo certbot --nginx -d transportactiongroup.co.za -d
www.transportactiongroup.co.za
```

Test: Open <https://transportactiongroup.co.za> — homepage must load.

Site 2 — GreenFreight Academy

ZIP: GFA-greenfreightacademy.co.za.zip | **Port:** 3001 | **Domain:** greenfreightacademy.co.za

```
unzip GFA-greenfreightacademy.co.za.zip -d GFA
cd GFA
chmod +x deploy.sh
bash deploy.sh
```

Then configure Nginx:

```
sudo cp nginx.conf /etc/nginx/sites-available/gfa
sudo ln -s /etc/nginx/sites-available/gfa /etc/nginx/sites-enabled/gfa
sudo nginx -t && sudo systemctl reload nginx
sudo certbot --nginx -d greenfreightacademy.co.za -d
www.greenfreightacademy.co.za
```

Test: Open <https://greenfreightacademy.co.za> — homepage must load.

Site 3 — BetterDriver

ZIP: BD-betterdriver.co.za.zip | **Port:** 3003 | **Domain:** betterdriver.co.za

```
unzip BD-betterdriver.co.za.zip -d BD
cd BD
chmod +x deploy.sh
bash deploy.sh
```

Then configure Nginx:

```
sudo cp nginx.conf /etc/nginx/sites-available/bd
sudo ln -s /etc/nginx/sites-available/bd /etc/nginx/sites-enabled/bd
sudo nginx -t && sudo systemctl reload nginx
sudo certbot --nginx -d betterdriver.co.za -d www.betterdriver.co.za
```

Test: Open <https://betterdriver.co.za> — homepage must load.

After All Three Sites Are Running

Enable PM2 to auto-start on server reboot (run once):

```
pm2 startup
pm2 save
```

Check all three sites are running:

```
pm2 status
```

You should see `tag-site`, `gfa-site`, and `bd-site` all showing **online**.

Useful PM2 Commands

Command	What it does
<code>pm2 status</code>	Show all running processes
<code>pm2 logs tag-site</code>	Live logs for TAG
<code>pm2 logs gfa-site</code>	Live logs for GFA
<code>pm2 logs bd-site</code>	Live logs for BD
<code>pm2 restart tag-site</code>	Restart TAG
<code>pm2 restart all</code>	Restart all three sites

If Something Goes Wrong

Site not loading: Check `pm2 logs <site-name>` for errors. Most common cause is a missing or incorrect env var in `.env.local`.

Images missing: The `deploy.sh` script handles this automatically. If images are still missing, run:

```
cp -r .next/static .next/standalone/.next/static
cp -r public .next/standalone/public    # (TAG and GFA only)
pm2 restart <site-name>
```

Port already in use: Run `sudo lsof -i:3001` (or $3002/3003$) to find the conflicting process and stop it.

Full deployment guide: See [HANDOVER-Deployment-Integration-Guide.pdf](#) for Supabase setup, Moodle integration, Paystack webhooks, and smoke tests.
